Oscar Skjævestad

Team lead for IT and robot deployment at Wybe Robotics. I deploy humanoid robots, run the GPU fleet that trains them, and build the data pipeline that teaches them their jobs.

Work

06.2026 — NOW

CURRENT

Team Lead — IT & Robot Deployment

WYBE ROBOTICS AS · MOSS, NORWAY

Leading IT and robot deployment at a company that puts humanoid robots to work, and building the AI infrastructure that teaches them their jobs. The work spans the full chain from hardware to learned behaviour: deploying and operating the robots, running the GPU training fleet, and building the data engine behind our robot learning.

RESPONSIBILITIES

- Deploying and operating humanoid robots
- GPU training fleet — NVIDIA Jetson Thor and Grace Blackwell workstations
- Robot networking, edge inference deployment and NAS-backed data systems
- Company-wide IT infrastructure
- Procurement and front-office operations

KEY CONTRIBUTIONS

- Designed and shipped an end-to-end VR data-collection → training → evaluation loop that took our manipulation policies from zero to demonstrable pick-and-lift within days
- Built a self-service data pipeline: operators collect demonstrations in VR-teleoperated simulation, review and grade the data, and ship it straight into training of vision-language-action models
- Built the team's training console — live fleet monitoring, data quality gates and one-click dataset-to-model pipelines across distributed GPU machines

02.2024 — 05.2026

IT Technician — IT Operations & Infrastructure

1X TECHNOLOGIES AS · MOSS, NORWAY

Supported global IT operations and infrastructure at an internationally growing robotics company. Involved in designing, implementing, and operating enterprise-grade IT environments across Norway and the USA — covering both office and production environments.

RESPONSIBILITIES

- Identity & Access Management (IAM)
- Endpoint management and security
- Network infrastructure
- Large-scale onboarding & offboarding
- Operational IT support across time zones

KEY CONTRIBUTIONS

- Key role in establishing and scaling offices and production facilities in the USA
- Contributed to transition and handover of IT operations as the organisation grew

Google Workspace · Microsoft 365 · Intune · Entra ID / Azure AD · Azure · Defender · Okta · Aruba Networks · Jira · Confluence

03.2023 – 02.2024

On-Call Factory Operative

BAMA INDUSTRI AS · MOSS, NORWAY

Temporary and on-call position in the operations department while completing supplementary general studies certification. Responsible for product packing and raw material preparation for production.

08.2022 – 02.2023

IT Consultant

DATA EQUIPMENT AS · OSLO, NORWAY

Internal IT support role — assisting employees with technical issues and contributing to infrastructure operations. Gained hands-on experience with server environments and enterprise networking.

- Internal IT support for staff
- Windows Server 2012 & 2019 administration

Windows Server · Kubernetes · SaltStack · Jira · Confluence · Palo Alto NGFW · Extreme Networks

Builds

LIVE

J.A.R.V.I.S. — local-first voice assistant

A voice assistant running on my own hardware: wake-word detection on a Raspberry Pi, local speech-to-text, and local language models on a GPU workstation. It controls the lights, TV, heating and my 3D printer through Home Assistant and Klipper, behind a permission ladder where anything physical needs a person to confirm. Backed by 500+ automated tests.

Python · Local LLMs · Home Assistant · Raspberry Pi

IN PROGRESS

InMoov robotic hand

Building the right hand and forearm of InMoov, the open-source 3D-printable humanoid robot. The electronics are soldered and wired: an Arduino Nano Matter drives a PCA9685 servo board with seven servos. All 17 parts are sliced and ready to print. Next come assembly, the control code, and voice control through J.A.R.V.I.S.
